

Queue Pseudo Code

→ create an array → $A[\text{size}]$

→ initialise $\text{front} = -1$, $\text{rear} = -1$

→ $\text{isfull}()$

```
{ if (rear == (size-1))
```

```
    return True;
```

```
else return False;
```

```
}
```

→ $\text{isEmpty}()$

```
{ if (front == -1 && rear == -1)
```

```
    return True;
```

```
else return False;
```

```
}
```

$\text{Enqueue}(x)$ // to add at the rear

```
{
```

```
    if (isfull)
```

```
        printf("Full");
```

```
    else if (isEmpty())
```

```
    {
```

```
        rear = front = 0;
```

```
        a[rear] = x;
```

```
    }
```

```
    else
```

```
        rear++;
```

```
        a[rear] = x;
```

```
}
```

$\text{Dequeue}()$

```
{
```

```
    if (isEmpty())
```

```
        printf("Q is empty");
```

```
    else if (rear == front)
```

```
    { a[front] = x;
```

```
        front = rear = -1;
```

```
    }
```

```
    else
```

```
        a[front] = x;
```

```
        front++;
```

```
}
```
